SUMMARY

Full-stack engineer with **2.5+ years** building enterprise B2B SaaS platforms across **React/Next.js** frontends and Node.js/TypeScript services — multi-tenant authorization and RBAC, REST API contract design, event-driven services, microservices on GCP Cloud Run, PostgreSQL and MongoDB.

EXPERIENCE

SDE-1 — Newtral Technologies Pvt. Ltd., Bangalore Sep 2025 – Sep 2026

- Delivered the **KPI Hub** data-collection module end to end — data models, REST API contracts, backend logic and React/TypeScript UI — with company- and facility-level coverage views and a record-level audit ledger.
- Designed **role-based access control** across four roles (Admin, Auditor, Reviewer, Contributor) with status-transition workflows and record-level actions, plus facility-level **multi-tenant data scoping** via organization/team mappings.
- Built an **AI-usage metering dashboard** tracking subscription tiers and per-user token consumption across services, with threshold alerting as accounts neared their limits.
- Migrated REST APIs from a monolithic core to **microservices on GCP Cloud Run**, holding request/response contract parity so no client changes were required.
- Traced an aggregation defect that under-reported KPI counts, isolating it through the query and filtering layers to a maintainable fix under TypeScript strict mode.
- Published reusable **npm packages** for reporting-period and cross-period calculations, adopted across multiple microservices; built event-driven filtering using programmatic query builders and JSON filter trees.

Software Developer — GIDA Technologies, Bangalore Mar 2024 – May 2025

- Rebuilt cart and product pages in **React / Next.js** for a smoother checkout and built a slug-based landing-page system letting marketing compose, reorder and publish unlimited pages with no engineering involvement; integrated **Sanity CMS** across e-commerce flows.
- Architected the state and data-fetching layers with **Redux, Zustand and React Query**, improving component reusability and cutting redundant API calls across product and cart flows.
- Single-handedly re-architected the **Strapi CMS** behind HDFC's insurance self-help portal to fix build failures at scale — flattening nested content models to dot-separated fields and writing the **frontend parsing layer** that rebuilt the expected nested shape, with **zero component rewrites**.
- Built end-to-end **Playwright** UI automation for the revamped flows, asserting the underlying API calls; integrated MoEngage, GA4, CleverTap and GTM for event tracking.

PROJECTS

AI-Powered Job Application Assistant github.com/snehapatilll/job-application-assistant

Node.js · Express · TypeScript (strict) · React · Vite · Tailwind · PostgreSQL · Google Gemini · AWS (RDS, VPC, SSM)

- Full-stack app that scores a resume against a job description and returns matched vs. missing skills, tailored bullet suggestions and a cover letter draft, with private per-user history; extracts text from PDF and DOCX uploads.
- Kept the fit score **deterministic and testable** — the LLM classifies each requirement's importance and match, application code computes the weighted score; **64 automated tests**, Zod validation of model output, retry-with-backoff on transient 429/503s.
- Provisioned **AWS RDS** PostgreSQL in private subnets with no internet route, reached through an **SSM**-managed EC2 bastion with zero inbound security-group rules; JWT sessions in httpOnly cookies, bcrypt-hashed credentials.

SKILLS

Languages	TypeScript, JavaScript, SQL
Backend & APIs	Node.js, Express, REST & API contract design, Swagger/OpenAPI, microservices, event-driven architecture, Zod/Joi, npm authoring
Frontend	React.js, Next.js, Redux, Zustand, React Query, Tailwind CSS, Ant Design
Databases	PostgreSQL, MongoDB, Mongoose, aggregation pipelines, schema & index design, data modelling, query builders
Cloud	GCP (Cloud Run), AWS (RDS, EC2, VPC, IAM, Systems Manager)
Engineering	RBAC & multi-tenant authorization, data scoping, TypeScript strict mode, technical design, code review, testing (Playwright, node:test), Agile/Scrum
Tools	Git, Jira, Postman, Swagger, Strapi, Sanity, Claude Code, Cursor

EDUCATION

CMR Institute of Technology, Bangalore — B.E. Electronics and Communication Engineering · GPA 8.87/10 Dec 2020 – Jun 2024
